
JavaScript Language

Introduction

- ▶ JS is a cross-platform, object-oriented scripting language originally used to make webpages interactive
- ▶ But nowadays, JS is largely used to:
 - ▶ Program servers
 - ▶ Program PC applications
 - ▶ Program mobile applications
- ▶ Advantages:
 - ▶ No compilation → quick development process
 - ▶ Simplicity
 - ▶ Unified language to program everything
 - ▶ Asynchronous IO
 - ▶ Modern programming model

Contents

- ▶ Data types, variables and expressions
 - ▶ `var, let, const`
 - ▶ `null, undefined`
 - ▶ Strings, arrays, objects
 - ▶ String substitution
 - ▶ `typeof, instanceof`
- ▶ Control statements
- ▶ Functions
- ▶ Arrow functions and functional programming
- ▶ Async functions
- ▶ Object and array destructuring
